

Complete the installation of your system with these fine Hired-Hand Green products.

RollSeal[®] Retractable Sidewall System

RollSeal is a retractable sidewall system that combines an unsurpassed ability to attain a positive seal with the ease of automation. The patented rolling and sealing action enables the sidewalls to be fully retracted to maximize ventilation, while retaining a positive, efficient seal when closed. All systems are motorized and can be operated manually or with an environmental control system. RollSeal is custom designed to meet the style and manufacture of each greenhouse system.

GREENTRAK[™] Curtain System for Greenhouses

GreenTrak is a drop down curtain system that vents from the top, providing an efficient introduction of cooler air into the greenhouse while allowing the warmer air to escape. The top track system and fabric side pockets enhance efficiency by providing a positive seal. Each system is custom tailored to the individual style and size of the greenhouse. Available options include: standard and upgraded curtain fabric, galvanized or stainless steel track and manual or automated drive. GreenTrak, the growers choice.

PowerTrak[™] Automatic Drive System for Curtains, Vents and Doors

PowerTrak is designed with service in mind and has set a new standard for power units with its 5000 pound capacity. Heavy-duty modular construction allows ease of service, while providing years of dependability. PowerTrak is the premier automated drive for drop down curtain systems and has become the grower's choice.

Super Saver^{XL} America's Finest Direct-Fired Greenhouse Heater

The Super Saver is a highly efficient direct-fired greenhouse heater designed for outside mounting. It's superior design combines the efficiency of direct-fired heat with the introduction of clean, fresh outside air to insure healthy, safe heat.

Super Saver^{XL} America's Finest Vented Greenhouse Heater

The Super Saver is a highly efficient vented heater designed to be mounted inside a greenhouse. For safe efficient heat, aluminized heat exchange tubes maximize the available heat produced by the burners, while the standard power vent exhausts any gas by-products out of the house.

Both models come in galvanized or stainless steel cabinets and feature the Service Saver electronic control module.
